*Note.* These numbers do not represent actual cases in persons with a diagnosis of AIDS. Rather, these numbers are point estimates of AIDS case counts that have been adjusted for reporting delays. The estimates have not been adjusted for incomplete reporting.

Since 2000, the following states have had laws or regulations requiring confidential name-based HIV infection reporting: Alabama, Alaska, Arizona, Arkansas, Colorado, Florida, Idaho, Indiana, Iowa, Kansas, Louisiana, Michigan, Minnesota, Mississippi, Missouri, Nebraska, Nevada, New Jersey, New Mexico, New York, North Carolina, North Dakota, Ohio, Oklahoma, South Carolina, South Dakota, Tennessee, Texas, Utah, Virginia, West Virginia, Wisconsin, and Wyoming. Since July 1997, Florida has had confidential name-based HIV infection reporting for new diagnoses only.

Dash indicates the absence of an AIDS-defining CD4 result.

<sup>a</sup> Because row totals were calculated independently of the row values, the values in each row may not sum to the row total.

<sup>b</sup> AIDS diagnosed 1–12 months after HIV diagnosis.

<sup>c</sup> AIDS-defining immunologic CD4 result (i.e., CD4 count < 200 cells/μL, or CD4 percentage < 14%).

<sup>d</sup> AIDS-defining diseases or conditions (i.e., opportunistic illness), according to 1993 case definition, and AIDS-defining immunologic CD4 result.

<sup>e</sup> AIDS-defining opportunistic illness, without AIDS-defining immunologic CD4 result.

<sup>f</sup> HIV and AIDS diagnosed during the same calendar month.
